

Elmhurst House, Stone, Staffordshire

Case Study

Elmhurst House is a listed Georgian building, originally a private residence and now used as offices. This is also a prominent landmark in the historic centre of Stone in Staffordshire.

Specialist UK Restorations Limited (SUKR) was asked for advice and to repair some structural damage by crack stitching. Then, because of their clear expertise and professional service, they were asked to complete the full cleaning and restoration of the façades.

In conjunction with their specialist materials supplier **NCC**, SUKR decided to use Remmers Rotec 'Whirljet' cleaning equipment. This was for all sensitive surfaces, together with Remmers' safe cleaning chemicals, followed by their stone and brick restoration materials.

This work also included restoration of lime renders, stucco plasterwork and exposed timber surfaces. All with the technical and logistic support of **NCC**.
